Hello, I'm Muhammed Muta Akar — an 18-year-old passionate and self-motivated developer with a strong interest in web technologies. I've been involved in programming from a young age and have developed solid skills in both front-end and back-end development. I specialize in HTML, CSS, JavaScript, PHP, React.js, and Next.js, and I enjoy turning ideas into clean, functional, and visually appealing websites.

My interest in full-stack development continues to grow. I aim to build complete web applications by combining design, logic, and problem-solving. On the front-end, I focus on crafting responsive and interactive user interfaces using modern frameworks like React.js and Next.js. On the back-end, I work on developing secure, scalable, and efficient systems with PHP and server-side technologies.

In addition to my technical skills, I am fluent in both Turkish and English, allowing me to collaborate effectively in diverse teams and stay connected with global developer communities. I'm always eager to learn new tools, tackle challenges, and push myself beyond my comfort zone.

Currently, I'm seeking opportunities to grow as a developer — whether through internships, freelance projects, or team collaborations. My goal is to become a well-rounded software engineer and create impactful solutions that add real-world value.

Work experience

Founder   Jun 2025 - Present
zons1337.com, Turkey/Istanbul

zons1337.com is a personal website designed and developed entirely by me. With my modern design approach and user-friendly interfaces, it offers a unique experience both visually and functionally. Using technologies like HTML, CSS, and JavaScript, I created a fully customized site. I developed this platform to showcase my personal projects, aiming to reflect my professional identity in the best possible way in the digital space.

Founder   Jun 2025 - Present
IntelSonar, Turkey/Istanbul

IntelSonar is a platform that develops solutions in the fields of Open Source Intelligence (OSINT) and Cyber Threat Intelligence (CTI). Founded in 2025 with my partner, I am one of the developers of this project. I am responsible for designing the platform's architecture and implementing advanced data collection, analysis, and visualization capabilities. Our goal is to help organizations detect digital threats proactively and enhance their data security.
